I Introduction

Voluntary certification schemes have been established for providing evidence of compliance with the sustainability requirements laid down in Directive (EU) 2018/2001. The Commission has been mandated to require these voluntary schemes in accordance with Article 30 (5) of Directive (EU) 2018/2001 to report regularly on their activity. With the publication of Implementing Regulation (EU) 2022/996 on June 14th, 2022, the reporting criteria for future reporting were updated by a delegated act.

The reports will be made public in order to increase transparency and to improve oversight by the Commission. Furthermore, such reporting would provide the necessary information for the Commission to report on the operation of the voluntary schemes with a view to identify best practice and submit, if appropriate, a proposal to further promote such best practice.

Voluntary schemes must report the following information in their annual activity reports to the Commission:

- 1 a list of their certification bodies used for independent auditing, indicating for each certification body by which entity or national public authority it was recognized and by which entity or national public authority it is monitored.

Further information is requested concerning:

2. rules on the independence, method and frequency of audits as approved by the Commission upon accreditation of the voluntary scheme and any changes to them over time to reflect Commission guidance, the modified regulatory framework, findings from internal monitoring on the auditing process of certification bodies and evolving industry best practice.
3. rules and procedures for identifying and dealing with non-compliance by economic operators and members of the scheme.
4. evidence of fulfilling the legal requirements on transparency and publication of information in line with Article 6.
5. stakeholder involvement, in particular on the consultation of indigenous and local communities prior to decision-making during the drafting and review of the scheme as well as during audits and the response to their contributions.
6. overview of the activities carried out by the voluntary scheme in cooperation with the certification bodies in order to improve the overall certification process and the qualification and independence of auditors and relevant scheme bodies.
7. market updates of the scheme, the amount of feedstock, biofuels, bioliquids, biomass fuels, recycled carbon fuels and renewable fuels of non-biological origin all certified, by country of origin and type, and the number of participants.
8. overview of the effectiveness of the implementing system put in place by the governance body of the voluntary scheme in order to track proof of conformity with the sustainability criteria that the scheme gives to its member(s). This shall cover, in particular, how the system

effectively prevents fraudulent activities by ensuring timely detection, treatment and follow-up of suspected fraud and other irregularities and where appropriate, the number of cases of fraud or irregularities detected.

9. criteria for the recognition of certification bodies.
10. rules on how the internal monitoring system is conducted and the results of its periodic review, specifically on oversight of the work of certification bodies and their auditors as well as on the system of handling complaints against economic operators and certification bodies;
11. possibilities to facilitate or improve the promotion of best practices.
12. voluntary schemes certifying forest biomass must include information on the way the risk assessment required in Article 29(6) and (7) of the Directive (EU) 2018/2001 is made.

The following report collects all the requested information about the certification scheme SURE-EU in a structured way and allows the reader to verify quickly whether all required information has been provided.

II Requested Information

1 LIST OF CERTIFICATION BODIES RECOGNISED

An up-to-date list of all certification bodies registered by SURE within the scope of the SURE EU scheme is publicly available on the [SURE webpage](#).

2 INDEPENDENCE, MODALITY AND FREQUENCY OF AUDITS

The requirements on certification bodies, auditors and audits in the frame of the SURE EU scheme are laid down in the document:

[Scheme principles for the certification process – Requirements and specifications](#)

Independence and impartiality

The certification bodies conduct their audits/inspections in accordance with the requirements of DIN EN ISO 19011 (which is mandatory for accreditation).

Evaluations and decisions may not be affected by personal relationships, financial incentives or other types of influences. The certification bodies and the auditors are independent of the interfaces, operations and suppliers and free of all conflicts of interest and can furnish proof of this.

Technical and staffing requirements

The certification bodies have the respective equipment and infrastructure to review compliance with the system requirements and the requirements of *the Directive (EU) 2018/2001 (RED II)* and their corresponding directives for all participants in the value chain. The certification bodies have sufficient qualified staff that fulfil the requirements listed under item 4. The verification that these prerequisites are fulfilled requires suitable documents on the equipment of the respective certification body, its structure and its staff.

Principle of peer review

To ensure that the principle of peer review is upheld (separation of evaluation and certification), the certification body employs at least two natural persons, both registered as auditors within the SURE-EU scheme. This means that the final decision of a certification is not made by the same person who performed the audit. The certification body also appoints a person who has in-depth system knowledge and is responsible for communication with SURE.

Handling complaints and claims

The certification bodies must have an effective process in place for handling complaints and claims. This process is part of the QM system of the respective certification body and guarantees the fastest possible response if there are complaints and claims, and, if necessary, the introduction of corrective measures.

On the other side SURE provides a public Complaint Management System (CMS) where every type of complaint against SURE, one of the certification bodies or their auditors or an operator certified under the SURE-EU scheme can be addressed, see also document:

[Scheme principles for integrity management](#)

Any appeal about a certification body's decision, its performance or any other hint about misbehaviour and frauds impose immediate action by SURE according to the Integrity Management System (IMS), which is defined in the document [Scheme principles for integrity management](#).

Audit intervals

The certification body must conduct a full audit at least once a year (maximum time interval 12 month) to verify that the operations still satisfy the requirements for certification. In consequence the certificate issued after a successful audit has a validity period of 12 month. The re-certification audit is to be carried out ideally before the existing certificate expires so that the certification can be maintained by issuing a new certificate without a gap. The certification decision must be made by the certification body no later than 42 days after the completion of the audit.

Additional mandatory surveillance audits were imposed for operators – collectors and/or traders - which deal with waste and residues feedstock after their initial certification. For those dealing only with waste and residues a full surveillance audit is required latest 6 month after the initial certification. For those, dealing with both – waste and residues as well as virgin material – an additional surveillance audit is required 3 months after the initial certification.

In the frame of its IMS SURE is authorized to order special audits performed either by the certification body in charge or by another qualified body / person appointed by SURE to assess potential non-conformities arising from complaints or suspects reported from the market.

3 METHODS FOR IDENTIFYING AND DEALING WITH NON-COMPLIANCE

For neutral audit within the SURE-EU scheme appropriate audit criteria have been defined. These criteria were transferred into four types of checklists:

1. Checklist for Agricultural biomass producers
2. Checklist for Forest biomass producers
3. Checklist for Producers for Waste and Residues
4. Checklist for Interfaces that use biomass fuels

Auditors of the certification bodies are obliged to use the SURE checklists without any exemption. It is mandatory to provide SURE with a fully documented checklist as an audit report by uploading it into SURE's scheme database before a certificate can be uploaded to the database (see chapter 4).

The inspection criteria are classified, some of the criteria are defined as 'critical' (KO-criteria). The classification of findings has been harmonized on request of the European Commission. Findings are flagged as:

'compliant'	in case of complete conformity with a criterion
'minor'	in case of a minor non-conformity with a criterion
'major'	in case of a major non-conformity with a criterion
'critical'	in case of a critical non-conformity with a criterion (= k.o.)

According to the auditor's finding for each criterion the result of the audit is calculated automatically. The result of an audit is also classified in three levels.

- Level 1 ➔ fully compliant
- Level 2 ➔ partially compliant (minor deviations detected to be solved in between the certification period)
- Level 3 ➔ non-compliant (due to critical criteria (KO) or a certain level/volume of minor/major deviations)

The auditor is responsible to define and to monitor corrective action for all deviations detected. All corrective action agreed with the operator have to be documented in the corresponding table of the checklist. In case of the result 'non-compliant' the sanction procedure of the SURE-EU scheme – defined in document [Scheme principles for integrity management](#) is launched.

Change of scheme by economic operators: As a mean of prevention against the risk of 'scheme hopping' SURE's approach of the registration process for new applicants has proved its worth.

Applicants to the SURE-EU scheme have to state any existing certificate and/or any withdrawn or suspended (before its regular expiry date) certificate as well as certificates under a different scheme which ended regularly at its expiry date and not due to non-conformities of another scheme recognized by the EU Commission. In all cases the applicant has to grant access for SURE to all relevant information concerning this non-compliance by contacting the other certification scheme and/or the former

certification body in charge. In addition, these statements have to be made for the legal entity applying for the SURE-EU scheme as well as for other companies or precursor entities to prevent them from simple name change disguising an operator's prehistory.

A new certificate under the SURE EU scheme can only be issued if all non-compliances under the former scheme have been corrected and assessed by the new certification body in charge under special scrutiny. Any false statement about an applicant's certification history detected after the registration allows SURE to cancel the system contract and to withdraw the certificate with immediate effect.

Company data ✓ Legal representative / Management ✓ Contact persons ✓ **Pre-certification** ✓ Summary

PRE-CERTIFICATION

Over the last 12 months...

...we operated under a different company/name/legal form/VAT number.

Company name* Tax ID

... we did not participate in any other certification scheme recognized by a national authority or the EU Commission for verification of the sustainability requirements of EU Directives 2009/28 ("RED I") or 2018/2001 ("RED II").

... we participated in a different certification scheme recognized by a national authority or the EU Commission for verification of the sustainability requirements of EU Directives 2009/28 ("RED I") or 2018/2001 ("RED II") and our certificate is currently valid.

Scheme recognized by a national authority

Scheme recognized by the EU Commission

Name of system*

Special audits took place in the last 12 months by the scheme operator: Yes No

... we participated in a different certification scheme recognized by a national authority or the EU Commission for verification of the sustainability requirements of EU Directives 2009/28 ("RED I") or 2018/2001 ("RED II") and our certificate ...

... we participated in a different certification scheme recognized by a national authority or the EU Commission for verification of the sustainability requirements of EU Directives 2009/28 ("RED I") or 2018/2001 ("RED II") and our certificate was revoked due non-compliance with certification scheme requirements.

We hereby explicitly authorise SUSTAINABLE RESOURCES Verification Scheme to request all documents that affect our scheme participation from the operator of the certification scheme we previously used for inspection.

SUSTAINABLE RESOURCES Verification Scheme will automatically send you a declaration of consent which needs to be filled out and sent immediately to the following address [database\[at\]sure-system.org](mailto:database[at]sure-system.org).

SUSTAINABLE RESOURCES Verification Scheme explicitly states that participation in the SURE certification system is not possible without the above-mentioned consent to the transfer of documents from the previously used certification system.

I take note that in case of incorrect or incomplete information on previous certifications, SUSTAINABLE RESOURCES Verification Scheme reserves the right to terminate the system participation without notice.

4 TRANSPARENCY, PARTICULARLY IN RELATION TO THE ACCESSIBILITY OF THE SCHEME

To meet the transparency requirements of legislators and our own standards for an integral certification scheme, SURE has defined a set of transparency measures which are defined in detail in the [Scheme principles for integrity management](#).

Transparency in scheme representation and documentation

SURE informs the interested public (potential scheme users, media, associations and special interest groups) extensively about the content and requirements of the certification scheme. All approved scheme documents required for implementation and monitoring the scheme are available at www.sure-system.org. In addition, SURE provides tools and informational materials to scheme participants and the certification bodies who work for them. Interested parties and authorities thus have the opportunity to view these documents at any time and keep up to date on the current status of the scheme by receiving a free newsletter.

Transparency in scheme membership

SURE concludes written contracts with the scheme participants (economic operators) and with the certification bodies active in the scheme. These contracts clearly stipulate the rights and obligations of the respective parties.

These contracts ensure that the requirements of the certification scheme:

- a) are binding in their application
- b) can be verified and are transparent
- c) can, when necessary, be enforced with legal means

The contracts with certification bodies assure that Member State authorities can supervise the operation of certification bodies as set out under Article 30 (9) of the Directive.

If the European Commission will be required - upon request of a Member State, or its own initiative - to investigate whether the SURE-EU scheme operates according to the rules or to examine whether the sustainability and greenhouse gas emissions saving criteria in relation to a particular consignment are met, the appropriate access to relevant data e.g. such as audit reports and actual GHG calculations either from operators or from certification bodies is assured by contractual provisions.

The contracts are carefully structured standard documents. Individual agreements relating to the scheme requirements are not made.

Transparency in scheme administration

SURE uses a database to manage the certification scheme that documents all

- ✓ scheme participants including all dependent operational sites of each member registered
- ✓ all of the audits conducted regardless of result
- ✓ all certificates issued under the SURE-EU scheme
- ✓ all sanction measures
- ✓ market data relevant for the scheme's reporting obligation to the European Commission

The scheme management is always able to give authorised groups information about the status of the participants, audits and sanctions.

SURE fulfils the officially specified information and reporting obligations stipulated in Directive (EU) 2018/2001 Article 30 (5) according to the data reporting template which is made available on the EU Commission's website via voluntary schemes adapted to the requirements of power and heat generation from biomass fuels. The required information is submitted to the responsible offices of the European commission within the specified period (by 30 April of the year after the reporting year).

Transparency in scheme certification

A valid certificate is an essential prerequisite for trade with certified sustainable biomass or biomass fuels. To make it possible for all economic operators to have a transparent and tamper-proof overview of all certificates issued in the SURE-EU scheme – valid, expired, suspended and withdrawn – the SURE database publicly makes these certificates available online together with detailed information on the validity and the scope of application.

The certification bodies responsible for issuing and monitoring the certificates guarantee that the data is always up to date on a daily basis.

Certificates are listed with the following data (see also figure 2 below):

- ✓ Status of certificate (valid, suspended, expired/withdrawn)
- ✓ certificate's identifier
- ✓ name and contact details of the economic operator
- ✓ validity period
- ✓ scope of certification (type of operations)
- ✓ list of biomass handled by the certified site
- ✓ name and contact details of the certification body
- ✓ PDF copy of certificate

CERTIFICATES AND INSPECTION CERTIFICATES

All certificates and inspection certificates issued in the SURE system can be found here.
A legend with a list of all abbreviations and an explanation of the symbols can be viewed [here](#).

Identifier: Company name: Country: Status: Valid from: Valid to:

Scope: Biomass: Certification body: Type:

Please notify us of certificates and inspection certificates that have allegedly been issued so that we can also improve the integrity of the SURE-systems in this way.

5 STAKEHOLDER INVOLVEMENT

Shareholders' Assembly

The SURE-EU scheme is supported by several branch organisations ([shareholders](#)) that largely represent the economic operators in the agriculture- and forestry sector as well as producers of heat and electricity from biomass fuels.

The scheme's operation is fully independent and not influenced by the shareholders. Key decisions concerning the operation of the scheme are made in the shareholders' assembly by simple majority. All decisions made must be documented in an appropriate form.

Technical Committee

To make use of the specific branch expertise and to receive feedback from the operators SURE has established a [Technical Committee](#). The committee's expertise is essential to the SURE-EU scheme. Its primary task is to advise the executive management and initiate and promote the process of continuous improvement and the further development of the SURE-EU scheme. The scheme documents have to be adopted by the board before they're presented to the European Commission for recognition.

The process of shareholder as well as stakeholder involvement is defined in 'Rules on procedure' where – beside other items – SURE focuses in independence and impartiality to avoid any conflict of interest between the involved person and parties.

Representatives of certification bodies, national authorities, scientists as well as NGO's and other parties potentially affected are invited to cooperate with SURE on this technical level. So far, SURE is not engaged in regions or countries where the interests of indigenous and local communities are potentially in conflict with the land-use for biomass production.

National Supporting Bodies

SURE has also established a panel for national associations and institutions, so-called [National Supporting Bodies \(NSB\)](#), to provide a platform for the exchange of experiences with economic operators in the EU member states. The aim of the NSB panel is to support the national associations in the respective countries in the implementation of the REDII / the SURE requirements and to contribute to a proper knowledge transfer. On the other hand, SURE receives valuable feedback from economic operators in the various markets on the feasibility of implementing the system requirements under the most diverse framework conditions and market circumstances in the member states and can provide REDII-compliant solutions accordingly.

For this purpose, the NSBs organize a workshop or meetings with the affected economic operators and other interested stakeholders such as environmental associations and representatives of the authorities at least once a year, translate the essential requirements of the SURE system as a reading version in order to avoid language barriers, and are qualified by SURE as the first point of contact for REDII implementation issues. Any outstanding issues and recommendations to adjust or enhance the system are reported directly to SURE.

In 2022, SURE staff attended four NSB workshops.

Exchange of Experience

To harmonize and to 'calibrate' the certification bodies operating in the frame of the SURE- EU scheme regular meetings, so-called 'Exchange-of-Experience' (EoE) are organized on a regularly basis, at least once per year. Here, open questions are answered or unclear processes are described in order to contribute to a harmonized approach of the certification bodies. Experiences from the audit process are brought to the SURE system for the optimization of the procedures and approaches for the further development of the system are discussed. These Exchange of Experience are also organised upon request if the certification bodies require guidance from the SURE scheme.

In 2022, SURE organized 4 EoE in April and November/December, two for German speaking certification bodies doing audits in Germany, and two for certification bodies doing audits in international markets.

General dialogue

SURE participates in numerous conferences, seminars and other events organized by associations, environmental organizations or even competent bodies of the member countries and reports from the certification practice, shares experiences from the different processes or in the EU member states and, on the other hand, takes notes or suggestions from the participants and takes them into account in the continuous development of the system.

In 2022, SURE has gone to 10 international conferences and seminars to explain the requirements of the SURE system and address questions from participants.

6 OVERALL ROBUSTNESS OF THE SCHEME

SURE provides a robust and reliable certification scheme which complies with the European legal requirements concerning the heat and electricity production from sustainable biomass fuels as well as with the expectations and needs of economic operators along the whole production chain, being also aware of the expectations of other third parties (see No. 5). This has been confirmed by the recognition of the SURE-EU scheme in April 2022.

SURE follows the principle of 'active scheme management' by providing/requiring

- ✓ a consistent scheme documentation,
- ✓ a certification process according to principles of the European Co-operation for Accreditation (EA),
- ✓ a transparent scheme administration, regular reports and publications,
- ✓ a public database of certificates,
- ✓ a Complaint Management System (CMS) where all type of complaints against the SURE-EU scheme are managed,
- ✓ an Integrity Management System (IMS),
- ✓ a Sanction System for handling major non-conformities.

Beside these documented and published tools for a robust scheme, SURE

- ✓ provides a broad service and support for economic operators and certification bodies under the SURE-EU scheme and

- ✓ has imposed a risk and crisis management system to handle all type of incidents which may affect SURE's image and integrity.

SURE's service includes training offers for economic operators as well as for certification bodies, for example 'Train-the-Trainer' seminars for certification body staff or inhouse trainings for economic operators. The SURE team is available for individual support of economic operators and certification bodies via several communication channels.

With a view on the additional requirements of the 'Implementing Regulation (EU) 2022/996 of 14 June 2022 on rules to verify sustainability and greenhouse gas emissions saving criteria and low indirect land-use change-risk criteria' on the accreditation of certification bodies SURE is cooperating with ANSI/ANAB¹ to establish an accreditation procedure for its certification bodies according to the provisions of the IAF International Accreditation Forum.

7 MARKET UPDATES OF THE SCHEME

The SURE-EU system has been developed as a "full scope" certification scheme in order to do reflect the heterogeneity of the bioenergy sector and all economic operators in the field of electricity and heat generation from biomass fuels that fall within the scope of Directive (EU) 2018 /2001 and to enable certification. The SURE-EU system can be applied on a global level and is not limited to individual countries or regions.

The different requirements that are placed on the respective production of agricultural and forestry biomass or waste and residues from biomass, as well as the respective obligations of the downstream economic operators are specified in the SURE-EU system via its scopes for which the economic operators register in the SURE database.

The generation of electricity and/or heat from sustainable biomass fuels can only be verified as sustainable if the entire supply chain, from the production of the biomass to the conversion plant, has been certified according to the principles of an EU-recognized voluntary or national scheme. This presents downstream interfaces in particular with the challenge of only being able to register biomass as sustainable if their own suppliers are already certified themselves and were therefore able to deliver biomass as sustainable fuel. In practice, this leads to disruptions in sustainable biomass supply chains when the biomass plant is already certified, but the upstream suppliers not yet. The reason for this is often a lack of knowledge about the new obligation to provide proof of compliance with REDII and the very large number of suppliers affected, combined with the limited availability of qualified and approved auditors. This in turn requires a sufficiently long lead time to inform all upstream suppliers about the obligation to provide evidence and, if necessary, to certify them.

Last year's experience also has shown that certification of REDII requirements will only take place after corresponding legal implementation in the EU member states. While in the first half of the year 2022 the sustainability requirements of REDII were still only implemented in a few member states, in the second half of the year initiatives in further countries have become clearly recognizable, which are

¹ ANSI/ANAB - ANSI National Accreditation Board

reflected in an increase in registrations of economic operators from the corresponding countries in the SURE system.

In result, in 2022, a very large number of certifications were carried out in the SURE-EU-System, first and foremost in Germany, due to the early implementation of REDII, followed by Spain and Poland, while economic operators from other countries increasingly sought a SUREEU certificate from the second half.

Both effects - a lengthy development of certified supply chains with expected gaps for a large number of different biomass fuels, as well as the entry into force of national legislations in 2022 can clearly be seen in the registrations with the SURE-EU system in 2022, the development of the audits and certifications already carried out and the reported quantities of sustainable biomass already used.

As of 31 December 2022, the number of registered system participants increased from 1,915 system participants at year-end 2021 to 3,589 economic operators, while the number of certificates issued increased from 144 in 2021 to 2,837.

Figure 3: Registrations and certificates in the SURE-EU-System 2022

Distribution of certificates by country [2022]

Figure 4: Distribution of certificates by country [2022]

The distribution of the total value-added levels certified in the SURE system in 2022 reflects a very balanced picture. The year 2022 is dominated by electricity generation from biogas plants in Germany, which are operated in large numbers by farmers who generate their own feedstocks for biogas production and convert them into electricity on site. Accordingly, the number of co-certified producers in the agricultural biomass sector is also high.

Certified scopes in 2022 (multiple counting of economic operators possible)

Figure 5: Certified scopes in 2022

For 2022, a total of 36.5 million tons of biomass was reported as sustainable biomass for electricity and heat production in the SURE system at the level of first gathering points and collection points. Feedstocks for biogas production account for about 30 million tons, or 82%, and solid biomass fuels account for about 6.5 million tons, or 18%.

Biomass fuels in 2022 [million t]

Figure 6: Total volume of sustainable biomass fuels in the SURE-EU-System in 2022 [million t]

Figure 7: Total volume of sustainable biomass fuels in the SURE-EU-System by category in 2022 [million t]

The production of agricultural biomass for biogas production clearly dominates the amount of biomass registered as sustainable with a good 23 million tons (thereof 14.4 Million tons Maize and Maize WPS), followed by about 10.5 million tons of waste and residues from biomass. Among the waste and residues, liquid and solid manure for biogas production account for a combined 6 million tons.

Sustainable feedstock in the biogas sector in 2022 [million tons]

Figure 8: Total volume of sustainable feedstock in the biogas sector in 2022 [million tons]

Looking at sustainable woodfuel production, about 5 million tons of woody biomass fuels were reported for 2022, of which 2.7 million tons is waste and residues (waste wood, residues from wood processing industries, etc.) and 2.4 million tons primary woody biomass (out of which 0.7 million tons is forest residues).

Sustainable woody biomass fuels in 2022 [Million tons]

Figure 9: Sustainable woody biomass fuels in 2022 [million tons]

Figure 10: Total volume of sustainable feedstock in the solid biomass sector in 2022 [million tons]

For the reporting year 2022, 2048 biomass and biogas plants reported a produced amount of electricity from sustainable biomass fuels of 47,816,082,340 MJ (13.28 billion kWh). In addition, 647 biomass and biogas plants reported producing 47,816,082,340 MJ of usable heat from sustainable biomass fuels in 2022.

Figure 11: Final energy from sustainable biomass fuels in 2022 [MJ]

8 SYSTEM THAT TRACKS THE PROOFS OF CONFORMITY WITH THE SUSTAINABILITY CRITERIA

Each operator in the SURE-EU scheme is obligated to provide appropriate evidence for the sustainability claims he makes by documentation which has to be kept and archived for a minimum 5-year period.

Such documentation must provide traceability of the sustainability criteria according to the principles of mass balancing or segregation.

The documentation shall be provided in an auditable form based on a management system which defines type, content, frequency, way and duration of storage/archive.

During the audit the operator is obliged to open all files and documentation requested by the auditor which are related with the sustainability criteria under the SURE-EU scheme and must be prepared to provide further information about feedstock/biomass fuel under other certification schemes on site or accounting details on request of the auditor. On request of the auditor an operator has to provide additional information on any non-sustainable feedstock / biomass fuel, or those quantities covered by a different certification scheme when the operator has joined more than one certification scheme.

The upcoming 'Union Database' is already anchored as a mandatory system in the SURE-EU scheme for tracking all consignments of biomass fuels (if applicable) provided in the European Union for the fulfilment of the GHG saving obligations. It is expected to achieve an operational status of the database until the end of 2023. Until then, several pilot applications will check and proof the concept and usability of the Union Database.

Anyway, 'Proofs of Sustainability' for biomass fuels (PoS) are under special scrutiny with respect to the calculation and declaration of GHG emission savings. Certification bodies are requested to assess all PoS in detail and to follow the methodology of GHG calculation for the particular pathway. Certification bodies are required to assess individual GHG calculations of an operator prior to their first implementation to assure a robust calculation methodology from the very beginning.

9 ENTITIES TO BE AUTHORISED TO RECOGNISE AND MONITOR CERTIFICATION BODIES

All certification bodies which are registered in the SURE-EU scheme (see annex table 1) must be recognised by a national public authority or hold an accreditation in line with ISO/IEC 17065 or ISO/IEC 17021. This kind of accreditation is performed by members of the International Accreditation Forum (IAF), by the bodies referred to in Article 4 of Regulation (EC) No 765/2008 or by bodies that have a bilateral agreement with the European Cooperation for Accreditation (EA).

According to the 'Implementing Act' SURE has – together with REDcert – started a joined project with ANAB to establish the certification schemes as accreditable according to ISO/IEC 17065. The option of establishing a scheme-specific accreditation seems to be the only way as nobody will take over the challenge to establish a generic RED II accreditation as it is offered by the Implementing Act. Certification bodies operating under several voluntary schemes therefore would have to seek an individual accreditation for each of the schemes.

In addition, an accreditation against ISO 14065 is required for those certification bodies assessing actual GHG calculations.

10 CRITERIA FOR THE RECOGNITION OR ACCREDITATION OF CERTIFICATION BODIES

The criteria for the recognition or accreditation of certification bodies are also published in the ‘Scheme principles for the certification process’.

To become a certification body within the SURE-EU scheme it is until today required to provide recognition by a national public authority or an accreditation in line with ISO/IEC 17065 or ISO 17021. This kind of accreditation has to be performed by members of the International Accreditation Forum (IAF), by the bodies referred to in Article 4 of Regulation (EC) No 765/2008 or by bodies that have a bilateral agreement with the European Cooperation for Accreditation

The certification body submits an application for registration with SURE as outlined in section 5.1.2. Registration by SURE and contract conclusion of the document mentioned above under the SURE-EU voluntary scheme. After all required documents have been submitted, SURE decides - after assessing the application documents - whether to approve or reject the application and informs the applicant of the decision in writing. The certification body is registered by SURE by concluding a written, legally binding contract created by SURE. The certification body is only authorised to perform audits and issue certificates under the SURE certification system once the signed contract has been received. Granting access to the scheme’s database requires a valid contract.

11 RULES ON CONDUCTING THE MONITORING OF CERTIFICATION BODIES

SURE performs a systematic monitoring of its certification bodies and certification activities as a part of its Integrity Management System (IMS).

The monitoring focuses on a properly performed certification process with respect to time flow (defined time slots for reporting of audits and issuing of certificates, documentation (proper peer review and significance of findings in the audit report, potential contradictions between findings and results etc.) and duration of an audit (expended audit time with respect to an operator’s scope and complexity of process).

In the event of conspicuously deviating values, the certification body in question is contacted directly and asked to undertake corrective measures. If the deviations continue, SURE can exclude the respective certification body from the voluntary scheme. In addition, the scheme operator regularly carries out sample inspections of the audit reports stored in the database to ensure that:

- ✓ the reports are complete
- ✓ the reports are understandable (informative and easy to read)
- ✓ the reports are coherent (consistency between evaluation and description of facts)
- ✓ the results are plausibly presented

In 2022 SURE monitored 109 certification procedures. With a total number of 2837 issued certificates and 3196 stored audit reports (including surveillance audit reports), this number exceeds the internal target to monitor at least the square root of the stored certification procedures by almost 50 %.

Figure 12: Issued certificates in 2022

Some facts and figures:

- ✓ Total issued certificates in 2022: 2,837
 - Square root of 2837: 57

- ✓ Actually monitored procedures/reports: 109
 - Q1 January-March 2022: 13 (168 total)
 - Q2 April-June 2022: 35 (1,215 total)
 - Q3 July-September 2022: 30 (865 total)
 - Q4 October-December 2022: 31 (948 total)

Table 1: Criteria for random selection of certification bodies and scheme participants for internal

Criteria for random selection of certification bodies and scheme participants for internal monitoring of audit reports	
<ul style="list-style-type: none"> ✓ Random (all scheme participants and certification body are subject to the SURE integrity programme/monitoring)) ✓ Indications of non-compliance or fraud ✓ Minimum sample scope: \sqrt{n} of the stored audit reports per quarter 	
Risk-based criteria for the selection of scheme participants:	Risk-based criteria for the selection of certification bodies:
<ul style="list-style-type: none"> ✓ Place/region ✓ Scope of application ✓ Type of biomass 	<ul style="list-style-type: none"> ✓ Number of audits conducted per certification body ✓ Number of audits conducted per auditor ✓ Significant deviations from average audit duration(25%) ✓ Place/region of the activity

The SURE-EU database is used to view and analyse all certifications that have been carried out. Statistics are among others compiled for the following criteria:

1. Compliance of registered scopes and scopes certified by CB
 - ✓ The development from Q1 to Q4 shows that both participants and certification bodies had to make significantly fewer corrections. This indicates that the assessment of the activities to be certified in the SURE-EU System is becoming more secure. Whereas in the first quarter there were still corrections of scopes of almost 35%, in the last quarter of 2022 no corrections of scopes had to be made in the monitored procedures.
2. Do auditors audit within the confirmed scopes for which they are qualified
 - ✓ Over all 109 certification procedures monitored two cases were evident in which auditors have audited out of scope.
3. Compliance with the deadlines prescribed by the voluntary scheme for reporting and issuing certificates (42 days after audit date)
 - ✓ Approximately 35% of all monitored procedures show missed deadlines
 - ✓ The cluster of missed deadlines in the first half of 2022 can be explained by the high demand for certificates on the one hand and the lack of sufficient number of qualified auditors in the market on the other hand
 - ✓ In the second half of 2022, however, there is a visible improvement except for a few outliers.

4. Duration of “on-site” audits

- ✓ Varies between 1 and 16 hours
- ✓ Reasons include combined audits where different systems are audited simultaneously.

Furthermore, due to an incorrect definition of the First Gathering Point in the forestry sector, companies have been inspected as group members, which are themselves subject to the certification obligation. The responsible certification bodies were ordered to make up for the approximately 140 outstanding certification procedures within a reasonable period of time.

In any cases all SURE registered certification bodies were made aware of the above mentioned issues during the obligatory Exchange of Experience (EoE) for certification bodies which have been held twice in 2022 and in various clarification and notification e-mails to the certification bodies which have binding character.

Here, too, improvement is noticeable after the EoE.

In any case of a noticeable deviation the certification body is required to provide further explanations or corrections.

In case of repetitive problems SURE is authorized to exclude a certification body from the scheme.

In addition, the ‘quality’ of audits with respect to an auditor’s specific skills and knowledge is assessed by SURE, too. Therefore, auditors are registered for SURE-EU scheme according to their proven expertise, trainings and education. With respect to their proven skills and expertise one or more specific scopes are assigned to each auditor in which he’s allowed to perform audits. SURE is monitoring its certification bodies, if auditors are only active within their assigned scope. If not, an audit cannot be registered in the SURE database and must be repeated.

Certification bodies are required to perform regular trainings for all auditors and staff working within the frame of the SURE-EU scheme. Therefore, each certification body has to nominate as a minimum one trainer which has been trained directly and is registered by SURE.

Beside the monitoring activities of competent authorities and accreditation bodies SURE itself is authorized to perform special audits such as office and witness audits in certification bodies headquarters or in the field (witness audit of auditors) as part of its Integrity Management System (IMS). Such special audits are performed in case of repetitive problems, complaints and any other observations which may indicate potential non-conformities affecting certification body’s work.

As a consequence of all this monitoring activities a certificate can be suspended or withdrawn before its regular expiry date. Suspended certificates maybe reinstalled after the particular case (any suspect about or charge against the operator) has been cleared.

218 certificates were suspended or withdrawn by the responsible certification bodies or SURE in 2022. The far dominantly given reasons for suspension or withdrawal were:

- ✓ scope extension - if the certificate holder starts new activities during the validity of the certificate, the certificate must be withdrawn and a new certificate with an adapted scope must be issued after a successful audit
- ✓ early re-certification - there are several reasons to prefer an early re-certification. Among others, this can harmonize different certification cycles of different systems for one economic operator so effort and costs of certification procedures may be minimized.

Usually a suspension or withdrawal of certificates may also be due to:

- ✓ contractual reason (e.g. unpaid fees)
- ✓ refusing an obligatory surveillance audit
- ✓ severe non-conformities detected via monitoring and integrity management activities
- ✓ submitting corrective measures late

In 2022 SURE received no detailed messages about potential fraud activities.

12 POSSIBILITIES TO FACILITATE OR IMPROVE PROMOTION OF BEST PRACTICE

By involving experts from all economic groups affected, particularly practitioners from companies situated along the production chain of biomass fuels, the aim is to ensure a practice-oriented structure of the scheme. The technical committee of SURE is the platform to encourage and to promote this approach of promoting best practise. To grant a robust decision process and to avoid potential conflicts of interest the board's working procedure is defined in appropriate 'Rules of Procedure'.

The expertise as well as recommendations and tools developed for an efficient implementation of the scheme are published and shared among operators and certification bodies via

- ✓ the SURE Newsletter (regular newsletter registration open for every interested person via SURE's website)
- ✓ specific INFO e-mails for the certification body
- ✓ public announcements on SURE's website
- ✓ trainings and webinars
- ✓ presentation at seminars and conferences dealing with sustainable biomassfuel
- ✓ publication in branch media (national/international journal)

Certification bodies must attend minimum once per year a full day training and 'Exchange-of – Experience' (EoE) provided by SURE (see chapter 5). This EoE events focus on updates on

- ✓ legal and scheme requirements and
- ✓ the improvement and harmonisation of the certification process among the registered certification bodies.
- ✓ Common understanding and exchange of experience

Certification bodies must report to SURE about all internal trainings and topics addressed for auditors in the scope of the SURE-EU scheme.

SURE cooperates with all national competent authorities of European Member States. Typically, authorities are asking about the status of particular certified operators or specific Proofs of Sustainability (PoS) in case of uncertainty or suspect of fraud.

Consequently, SURE continues to cooperate with other voluntary schemes with respect to inter-scheme-tracking of major non-conformities and a common understanding of certain best practises to achieve mutual recognition between schemes. The implementation of the RED II has raised a couple of practical questions which have been addressed and discussed by the voluntary schemes already. In addition, the 'Implementing Act' requires an ongoing exchange of information and interpretations.

13 INFORMATION ON THE WAY THE RISK ASSESSMENT REQUIRED IN ART. 29 (6) AND (7) OF DIRECTIVE (EU) 2018/2001 IS MADE IN THE SURE-EU-SYSTEM

The risk-based approach outlined in Directive (EU) 2018/2001 (RED II) is implemented in the SURE-EU system by means of a dedicated risk assessment. Risk assessment is the systematic process of assessing potential risks that may be associated with an activity or undertaking. The risk assessment aims to minimize the probability that unsustainable forest biomass is sourced using a structured approach.

The methodology to be applied to develop this risk assessment is defined in the SURE document [Technical guidance for the assessment of the risk of unsustainable production of forest biomass](#) which is available for download at www.sure-system.org.

The risk-based approach for forest biomass in the SURE-EU system assesses whether the required sustainability criteria are already sufficiently implemented through national or sub-national legislation in the biomass sourcing area, whether they are being efficiently verified and, if necessary, sanctioned. If the assessment concludes that the sustainability criteria are already reflected in the relevant forest management legislation and that the laws are reliably enforced and monitored, the risk that the biomass was taken from unsustainably managed forests is considered low.

In this document, risk is defined as the possible negative outcome of a planned goal, which is associated with disadvantages, loss or damage. The aim of the risk-based approach in the SURE-EU system is to obtain forest biomass from sourcing areas where the principles of sustainable forest management are upheld in accordance with the requirements of the criteria laid down in RED II in Article 29 (6) and (7) and in accordance with the requirements of the SURE-EU system.

In the risk assessment of the SURE-EU system, the risk that the respective sustainability criteria set forth in Article 29 (6) of RED II and the SURE-EU system are not met in the area where the forest biomass is sourced is objectively assessed in a three-step process.

In the risk assessment, steps 1 and 2 (identification of applicable laws and description of law enforcement and monitoring) must be carried out to determine the risk status as low-risk or specified-risk so that the results can be used to determine conformity with the requirements of the SURE-EU system and RED II.

Step 3 can optionally be used in risk assessments with a low-risk status to determine the risk level. The aim is to assess the effectiveness of the legal framework identified in steps 1 and 2 by identifying indicators. The risk level affects which producers are selected for sample inspections as part of the scheme audit of the first gathering point.

The assessment of the individual criteria using indicators in step 3 also determines the depth of the inspection in the sample inspection.

Leading questions on the three-step process:

- 1) Step 1: Identification of applicable laws
Are the requirements for sustainable forest management defined in RED II and the SURE-EU system implemented by national or sub-national legislation within the scope of the risk assessment?
- 2) Step 2: Description of legal enforcement
Have the legal provisions identified within the scope of the risk assessment been put into practice and is their implementation monitored?
- 3) Step 3: Evaluation of effectiveness in low-risk areas (optional)
Has the effectiveness of the legal framework identified in steps 1 and 2 been documented for the individual sustainability criteria by identifying and evaluating indicators?

The risk assessment of the SURE-EU system also reviews the criteria stipulated in Article 29 (7) of RED II.

If the degree of compliance with the respective sustainability criteria has been established in steps 1 and 2 as specified in the SURE-EU system, the area covered by the scope of the risk assessment – depending on the result of the subsequent evaluation of the results – can be classified as follows:

- ✓ The area is an area with a low risk of unsustainable forest management (low-risk area). The requirements for transposition into applicable law and for law enforcement and monitoring are fulfilled for all sustainability criteria.
- ✓ The area is an area with a specific risk of unsustainable forest management (specified-risk area). The requirements for transposition into applicable law and for law enforcement and monitoring are deemed to be unfulfilled for at least one sustain-ability criterion.

The classification of the assessment area as a low-risk area means that the principles of sustainable forest management specified in RED II and the SURE-EU system are covered by legislation, monitored and sanctioned in the event of non-compliance.

In assessment areas classified as specified-risk areas, the principles of sustainable forest management as outlined in RED II and the SURE-EU system are not fully implemented for at least one sustainability criterion. In this case, compliance with the requirements for forest biomass must be verified in the area where the biomass was sourced for those sustainability criteria that are not fully implemented or found to be unsubstantiated in the risk assessment in accordance with the SURE document “Scheme principles for the production of forest bio-mass” of the SURE-EU system.

Risk assessments used in the SURE-EU system for the risk-based approach must be evaluated and recognized by SURE, or checked and verified by the auditors as part of the audit for timeliness, accuracy and completeness. Evidence of a stakeholder dialogue that has taken place is also part of this check.

Until 31 December 2022, one risk assessment of the sourcing area Germany was recognized and published on the SURE website. Another risk assessment was submitted to the SURE office for approval, but could not be accepted due to incomplete information.

A comprehensive and complete description of the procedure for preparing a risk assessment in the SURE-EU system and guidance on how to evaluate the results can be found in the [Technical Guidance for the assessment of the risk of unsustainable production of forest biomass](#).

The description of the verification of the proof of sustainability using the risk-based approach in the SURE-EU system can be found in the scheme principles for the certification process and further explained in the technical guidance.

III Annexes

Annex I List of certification bodies registered by SURE within the SURE-EU scheme until December 31st 2022

Certification Body	Country	Entity responsible for the recognition or accreditation* *= *Accreditation against ISO/IEC 17065
AGRIZERT Zertifizierungs GmbH	Germany	BLE (Federal Office for Agriculture and Food)
auditcert GmbH Umweltgutachterorganisation	Germany	BLE (Federal Office for Agriculture and Food)
BM Certification, SIA	Latvia	Latvian National Accreditation Bureau
Bureau Veritas Polska Sp. z o.o.	Poland	Polskie Centrum Akredytacji
CGN CERTIFICATION	Spain	American National Standards Institute (ANSI)
Control Union Certifications Germany GmbH	Germany	BLE (Federal Office for Agriculture and Food)
Control Union Poland Sp. z o.o.	Poland	Krajowy Ośrodek Wsparcia Rolnictwa (KOWR)
DEKRA Certification GmbH	Germany	BLE (Federal Office for Agriculture and Food)
DIN CERTCO Gesellschaft für Konformitätsbewertung mbH	Germany	BLE (Federal Office for Agriculture and Food)
DQS Polska sp. z o.o.	Poland	Krajowy Ośrodek Wsparcia Rolnictwa (KOWR)

ELUcert GmbH Umweltgutachter	Germany	BLE (Federal Office for Agriculture and Food)
ESC Cert GmbH	Germany	BLE (Federal Office for Agriculture and Food)
GFA Certification GmbH	Germany	BLE (Federal Office for Agriculture and Food)
greencert. Umweltgutachter GmbH	Germany	BLE (Federal Office for Agriculture and Food)
GUT Zertifizierungsgesellschaft für Managementsysteme mbH Umweltgutachter	Germany	BLE (Federal Office for Agriculture and Food)
IFTA AG	Germany	BLE (Federal Office for Agriculture and Food)
IFU-CERT Zertifizierungsgesellschaft für Managementsysteme mbH	Germany	BLE (Federal Office for Agriculture and Food)
Intechnica Cert GmbH	Germany	BLE (Federal Office for Agriculture and Food)
Müller-BBM Cert Umweltgutachter GmbH	Germany	BLE (Federal Office for Agriculture and Food)
Normec Zertifizierung Umweltgutachter GmbH	Germany	BLE (Federal Office for Agriculture and Food)
